B. API Reference

1. Registration

REQUEST

POST `/registration`

Header of Request

Parameter's name	Description	Mandatory
Merchant-Key	Merchant Unique Key	Yes
Content-Type	multipart/form-data; boundary=<calculated when request is sent>	Yes

BODY OF REQUEST

Parameter's name	Type	Example	Description
email*	String	user@usermail.com	User's valid email address. Max Length: `30` Must Valid Email Address: `true`
phone*	String	+62898321303511	User's valid phone number. Min Length: `7` Max Length: `15` Must Valid Phone Number: `true` Example: - `0821xxxxxxxx` - `0852xxxxxxxx` - `0812xxxxxxxx` - `0811xxxxxxxx`

	PRIVY IDENTITAS DIGITAL	No. Form: 007/1/API/TD-IT/PID/VI/2021
	Jl. Kemang Raya No. 15 C, Lantai 4, Bangka, Mampang Prapatan, Jakarta Selatan 12730 helpdesk@privy.id www.privy.id	Revision: 03
	Privy API Documentation - v.1.9.3 - non-RA	Date: April 18, 2022
		<i>Restricted Document</i>

			<ul style="list-style-type: none"> - `62811xxxxxxxx` - `62821xxxxxxxx` - `62813xxxxxxxx` - `62812xxxxxxxx` - `62811xxxxxxxx` - `+62811xxxxxxxx` - `+62821xxxxxxxx` - `+62813xxxxxxxx` - `+62812xxxxxxxx` - `+62811xxxxxxxx`
selfie*	File	ExampleSelfie.png	Face close up photo of Registrant on image format. Type: Image File Mandatory: True Max Size: 5MB (MB = Mega Byte) Allow Mime type: image/jpeg, image/png
ktp*	File	ExampleKTP.png	User's identity card on image format. Type: Image File Mandatory: true Max Size: 5MB (MB = Mega Byte) Allow Mime type: image/jpeg, image/png
identity*	Object[]	<pre>{ "nik": "1234123412341234", "nama": "Test", "tanggalLahir": "1993-02-02" }</pre>	Registrant's identity. NIK, name and date of birth required. NIK must be 16 digits and 16 th digits can't be 0

	PRIVY IDENTITAS DIGITAL	No. Form: 007/1/API/TD-IT/PID/VI/2021
	Jl. Kemang Raya No. 15 C, Lantai 4, Bangka, Mampang Prapatan, Jakarta Selatan 12730 helpdesk@privy.id www.privy.id	Revision: 03

* : Required

Note: The maximum total file size (both selfie + ktp) in every single registration request is 10mb.

RESPONSE PARAMETER

Parameter's name	Type	Description
code	String	HTTP Status Code
message	String	Message of response
data	Object[]	User's information
email	String	User's email
phone	String	User's phone
userToken	String	User's random token generated from Privy system
status	String	User's status. Value : waiting

Response

1. Success

```
{
  "code": 201,
  "message": "Waiting for Verification",
  "data": {
    "email": "example@mail.com",
    "phone": "+6288888899999",
    "userToken":
"yrag7ipl6g5j60pp5v478r7tgyv19jxqqw2lwm84bi51bg313wszbtmiyewa1obr",
    "status": "waiting"
  }
}
```

2. Unauthorized Response

This message invalid credential like username, password, and merchant key.
HTTP Status 401

```
{
  "code": 401,
  "message": "Authentication failure",
}
```

3. Timeout response

HTTP status 408

```
{
  "code": 408,
  "message": "request timeout"
}
```

4. Server error

HTTP status 500

```
{
  "code": 500,
  "message": "Something went wrong, please try again"
}
```

5. Unknown error

HTTP status 520

```
{
  "code": 520,
  "message": "Unknown Error"
}
```

6. Blank or invalid content-type

```
{
  "code": 422,
  "message": "Validation(s) Error",
  "errors": [
    {
      "field": "-",
      "messages": [
        "request parameter parse error"
      ]
    }
  ]
}
```

2. Check Registration Status

REQUEST

POST `/registration/status`

BODY OF REQUEST

Parameter's name	Type	Example	Description
token*	String	bec11d7ff1e1d592133745fbb7d166eefc fb376b24bd349eb9666b37a341599e	User's token from Registration API

*: Required

Header of Request

Parameter's name	Description	Required
Merchant-Key	Merchant Unique Key	Yes
Content-Type	form-data	Yes

RESPONSE PARAMETER

Parameter's name	Type	Description
code	String	HTTP Status Code
data	Object[]	User's information
email	String	User's email
phone	String	User's phone
data	Object[]	
privyId	String	User's PrivyID
userToken	String	User's random token generated from Privy system
status	String	User's status. Value : waiting, invalid, rejected, verified, registered

	PRIVY IDENTITAS DIGITAL	No. Form: 007/1/API/TD-IT/PID/VI/2021
	Jl. Kemang Raya No. 15 C, Lantai 4, Bangka, Mampang Prapatan, Jakarta Selatan 12730 helpdesk@privy.id www.privy.id	Revision: 03

identity	Object[]	User's identity based on his/her ID Card
nama	String	User's name
nik	String	User's identity number
tanggalLahir	String	User's birthdate
tempatLahir	String	User's birthplace
message	String	Message of response

Note :

User Status

1. **Waiting** : user is waiting to be verified
2. **Invalid** : user is rejected by privy and can be verified if user sends supporting data
3. **Rejected** : user is rejected by privy and cannot be verified again, because the document sent does not meet the requirements. User need to register again with another document or another identity card.

Example reason with rejected status : identity card can be found on the internet, ID number on identity card and supporting document (family card) not found.

4. **Verified** : user has been successfully verified by privy
5. **Registered** : user has been registered on privy

3. API Update Data

On this section, merchant can resend file support if user's status is invalid, for example, this is a payload response API check registration status :

```
{
  "code": 201,
  "data": {
    "privyId": null,
    "email": "user@example.com",
    "phone": "08233324223",
    "processedAt": "2019-06-26 15:50:03 +0700",
    "userToken":
"bec11d7ff1e1d592133745fbb7d166eefcfb376b24bd349eb9666b37a341599e",
    "status": "invalid",
    "reject": {
      "code": "PRVK002",
      "reason": "Foto KTP yang diunggah tidak dapat terbaca (mis.
gambar kabur, kecil, dll.)",
      "handlers": [
        {
          "category": "KTP",
          "handler": "Foto KTP/Resi e-KTP/e-KTP Asli",
          "file_support": []
        }
      ]
    }
  },
  "message": "Data Rejected"
}
```

Notes :

1. On "handler" parameter, there is an information about file support that need to be sent by merchant, on the example above, merchant must upload identity card file (KTP).
2. "category" shows API that need to be called
3. There are 3 URL with 3 different ID category (ktp, selfie, fileSupport), the category refers to "category" parameter.

RESPONSE PARAMETER

Parameter's name	Type	Description
code	String	HTTP Status Code
data	String	
errors	String	
message	String	Message of response

Response

1. Success – Update ID Card

```
{
  "code": 201,
  "data": null,
  "message": "Successfully upload ID Card"
}
```

2. Success – Update Selfie

```
{
  "code": 201,
  "data": null,
  "message": "Successfully upload Selfie"
}
```

3. Success – Registering with Supporting file

```
{
  "code": 201,
  "data": null,
  "message": "Registration has been successful"
}
```

4. User is not rejected/invalid

```
{
  "code": 403,
  "errors": [],
  "message": "Registration is not rejected."
}
```

	PRIVY IDENTITAS DIGITAL	No. Form: 007/1/API/TD-IT/PID/VI/2021

	Privy API Documentation - v.1.9.3 - non-RA	Date: April 18, 2022 <i>Restricted Document</i>

5. Invalid reregister (Using wrong reregister)

```
{
  "code": 403,
  "errors": [],
  "message": "Invalid reregister."
}
```

6. Invalid fileSupport Category (Only SIM/KK/PASSPORT/FILE-SUPPORT is accepted, based on the invalid reason)

```
{
  "code": 422,
  "errors": [
    {
      "field": 0,
      "messages": [
        "category for this user is not accepted. Category accepted
are / is SIM"
      ]
    }
  ],
  "message": "Validation(s) Error"
}
```

6. Signing setup

On this section, merchants can setup :

- Redirect after a successful sign
- Specific coordinate
- Specific page

With the following details:

```

<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta http-equiv="X-UA-Compatible" content="ie=edge">
  <title>Document</title>
</head>

<body>
  <div class="privy-document"></div>
  <script src="https://unpkg.com/privy-sdk@2.0.3/dist/privy-sdk.js"></script>
  <script>

Privy.openDoc('de4124f4770735d20d0f1681bbf7d539722ab50f951b2b9445e292c3ea790e3e', {
  dev      : true,
  container: '.privy-document',
  privyId  : 'AB001', //Autofill privyID
  signature: {
    page : 1,
    x    : 130,
    y    : 468,
    fixed: false
  }
})
.on('after-action', (data) => {
  // Redirecti after sign/review doc
  location.href = 'https://www.google.com/'
})
.on('after-sign', (data) => {
  // Redirecti after sign doc
  location.href = 'https://www.google.com/' // After sign doc
})
.on('after-review', (data) => {
  location.href = 'https://www.google.com/' // After review doc
})
  </script>
</body>
</html>

```

Notes:

	PRIVY IDENTITAS DIGITAL	No. Form: 007/1/API/TD-IT/PID/VI/2021

	Privy API Documentation - v.1.9.3 - non-RA	Date: April 18, 2022 <i>Restricted Document</i>

1. Insert acquired token after upload document with API on :
Privy.openDoc ('tokenDocument').
2. Environment configuration :
 - dev : true, document and redirect URL on environment sandbox.
 - dev : false. Document and redirect URL on environment production.
3. "privyId" fill with user privyid if merchant want to auto fill privyID when login
4. Signature (optional), to automatically set signature position after user login.
 - Page, page to be signed
 - x, y. signature coordinate.
 - Fixed, if "true", signature can't be moved and if "false", user still can move the signature on the desired place.
5. Redirect page:
 - On (after-action), redirect URL after signing or reviewing process completed.
 - On (after-sign), after sign completed, if merchant want to specifically differentiate for sign only
 - On (after-review), after review completed, if merchant want to specifically differentiate for reviewing document only

7. Callback

Callback Event Registration Status

This documentation shows a response after the registration is completed. To get a registration callback, the merchant is expected to provide a webhook that allows external services to be notified when a document status event occurs. The webhook URL should be static, and secured with credential, either bearer token or basic auth username and password.

If the merchant uses a callback service for registration and document status events, one webhook URL can be used for both. Privy system will only send to one webhook URL while both callback services will be differentiated by the **event-name** parameter in our payload.

Status description

1. **Invalid:** the user is rejected by Privy and can be verified if supporting data sent
2. **Rejected:** the user is rejected by Privy and cannot be verified again, because the document sent does not meet the requirements. Users need to register again with another document or another identity card.

Example reason with rejected status: identity card can be found on the internet, ID number on identity card and supporting document (family card) not found.

3. **Verified:** the user is successfully verified by Privy
4. **Registered:** the user is registered on Privy

message	String	Document has been completed	Message of event
---------	--------	-----------------------------	------------------

Example Payload

1. Every document completed without URL download

Merchant will get a notification when the document has been completed and get a URL to download the document.

```
{
  "eventName": "document-completed",
  "data": {
    "docTitle": "tes callback",
    "docToken":
"532fcb9100c96fcb53d1c9d61ed0036816e3238da2f2889023b9812ccc792b8",
    "recipients": [
      {
        "privyId": "UAT001",
        "type": "Reviewer",
        "signatoryStatus": "Completed"
      }
    ],
    "documentStatus": "Completed" },
  "message": "Document has been completed" }
```

2. Every document completed with URL download

Merchant will get a notification when the document has been completed and get a URL to download the document.

```
{
  "eventName": "document-completed",
  "data": {
    "docTitle": "tes callback",
    "docToken":
"4fb0f23ede0c68c8b1aa7fc56b1c0747170c3d1a8641ce8127ca37ca81c9232c",
